TECH STACK

PLATFORM & INFRASTRUCTURE

Kubernetes / RKE2 | Rancher Harvester | NetApp | NetBox | Terraform / OpenTofu | Salt

OBSERVABILITY & OPERATIONS

SUSE Observability | Prometheus | Grafana | Alertmanager | Zabbix | DNS / DHCP / NTP | HAProxy

AUTOMATION & CI/CD

GitHub Actions | Jenkins | Ruby | Python | Bash | Cucumber | Docker | DevContainers

AI & ENGINEERING

CrewAI | Ollama | Gemini APIs | LangChain | LangSmith

French	PROFESSIONAL WORKING

Professional Summary

I'm a QE Architect and Expert Software Engineer with over 20 years of experience in software engineering, test automation and quality engineering. I started my career in backend development at INRIA and later worked at King and Telefónica before joining SUSE, where I spent almost eight years working on test automation, quality engineering and engineering practices. My work has focused on designing automation strategies, building test frameworks and improving CI/CD workflows, with an emphasis on making software more reliable and easier to maintain.

More recently, I broadened my experience into Platform and Infrastructure Engineering as part of SUSE's IT Platform Engineering CORE team, working with Kubernetes environments, storage, inventory, network services and observability. I also enjoy sharing knowledge through conference talks, open-source mentoring and teaching.

Contributions & Engineering Highlights

- **TestOps & Observability:** Implemented CI-integrated synthetic monitoring with Prometheus Push Gateway and built Grafana/Prometheus dashboards to track flaky tests and historical test behaviour.
- **Large-scale E2E validation:** Built a maintenance validation pipeline that runs automated end-to-end tests across more than 70 systems in parallel.
- **AI-assisted quality engineering:** Developed an AI Test Reviewer to analyse pull requests, highlight coverage gaps and suggest tests.
- **Smart test selection:** Worked on pull-request E2E test selection based on code coverage analysis, presented at SeleniumConf 2025.
- **Developer experience:** Linked GitHub boards to HTML test reports for traceability and developed DevContainers to standardise contributor test environments.
- **Platform Engineering:** Worked across Rancher Harvester and RKE2, enterprise NetApp storage, NetBox inventory and core network services, with observability based on SUSE Observability, Grafana, Prometheus, Alertmanager and Zabbix.

Mentorship & Open Source

Google Summer of Code mentor for the openSUSE Project in 2025 and 2026.

GSoC 2025 - Predictive Test Selection

Mentored the development of a predictive test selection model for Uyuni, using code coverage analysis to improve developer workflow and testing efficiency. Supported project milestones, technical troubleshooting and delivery.

GSoC 2026

Co-mentored an openSUSE Google Summer of Code project.

Professional Experience

Platform Engineer - ITPE-CORE

Aug 2026 – Nov 2026

SUSE Platform & Infrastructure

- Contributed in core platform engineering and open infrastructure operations across Rancher Harvester and RKE2 Kubernetes environments.
- Administered enterprise NetApp storage systems and centralised infrastructure inventory through NetBox.
- Built and operated full-stack observability pipelines using SUSE Observability, Grafana, Prometheus, Alertmanager and Zabbix.
- Supported high availability for core network services, including DNS/DHCP, NTP and HAProxy.

QE Architect (Test Automation Expert)

Nov 2018 – Aug 2026

SUSE | Catalonia, Spain

- As Quality Engineering Architect for Multi-Linux Manager, led the technical strategy for scalable, observable and developer-friendly test automation.
- Previously QE Squad Coordinator and Test Product Owner for a team of eight; later focused on test architecture, tooling, Test Infrastructure as Code and end-to-end automation strategy across the product lifecycle.
- Drove a TestOps transformation aligning infrastructure, observability, automation and quality.

Mentor - Google Summer of Code 2026

May 2026 – Aug 2026

openSUSE Project

Mentored an openSUSE contributor through the 2026 Google Summer of Code programme.

Mentor - Google Summer of Code 2025

May 2025 – Oct 2025

openSUSE Project

Mentored the development of a predictive test selection model for Uyuni, helping define milestones, resolve technical challenges and improve developer workflow through automation and AI.

Adjunct Professor

Sep 2021 – Feb 2022

Universitat Autònoma de Barcelona

Taught Software Testing and Quality Engineering.

Software Engineer

Sep 2018 – Oct 2018

Ajuntament de Reus

Interim Project Lead at Urban Guard, overseeing the launch of a digital transformation initiative to modernise operations and services.

Backend Developer / Software Engineer in Test

Mar 2014 – May 2018

King (Activision Blizzard) | Barcelona & London

- Designed and developed a test automation framework from scratch for mobile games, and automated tests for games and services.
- Worked part-time as a backend developer before moving into a full-time backend role, contributing to data-driven experiments to improve gamer engagement and monetisation.
- Worked with Java, Python, C++, Jenkins, Selenium, Appium, Docker and mobile testing environments.

Software Development Engineer in Test / Test Lead / Performance Engineer

Dec 2009 – Feb 2014

Telefónica Innovación Digital

Held several quality and performance engineering roles across CDN, web acceleration and communication platform projects. Led a QA team of three to five engineers on Telefónica SmartCDN, contributing to its consolidation as core infrastructure for Movistar TV. Worked on functional, performance and security testing, network diagnostics, distributed systems and automated testing in Java.

Java Software Engineer

Sep 2007 – Sep 2009

LORIA - INRIA Nancy

Designed and developed the Human Task Service for the NovaBonita BPM solution, in collaboration with Bull and JBoss. Contributed to the Galaxy SOA platform and applied Scrum, XP, test-driven development and continuous integration. The project was showcased at JavaOne 2009.

Software Developer - Collaborative Learning Platform

Jul 2005 – Dec 2006

Universitat Rovira i Virgili

Contributed to a collaborative learning platform for distributed content and advanced learning methods, including augmented reality in virtual environments. Designed and implemented components including Duddi, Architect and Mr. Planet v2.0.

Performance Analyst Intern

Feb 2007 – Aug 2007

BULL / Bonitasoft

Studied and optimised Bonita Workflow performance in clustered environments, testing application servers and JVM implementations and developing custom ANT tasks and JUnit suites.

Speaking Engagements

- **SeleniumConf 2026:** *Quality on Autopilot: Scaling Testing in Uyuni*
- **SeleniumConf 2025:** *Speed Up PR Tests with Smart Code Coverage-Based Selection*
- **openSUSECon 2025:** *Quality on Autopilot: Scaling Testing in Uyuni Project*
- **SUSECon 2020:** *Automated QA for Maintenance Updates*
- **Community Engagement:** Co-creator of SUSE's internal monthly DevOps Meetup.

Education & Certifications

Master in Computer Science (Software Engineering M2P)

2008 – 2009

Université Henri Poincaré, Nancy 1

Computer Engineering

2002 – 2008

Universitat Rovira i Virgili
