

Goal: Inject synthetic checks into CI to monitor key product health metrics.

## Fitness Functions

- Objective measures summarizing how close a given design solution is to achieving set aims.
- We track these via continuous testing to highlight impacts on customer experience and motivate improvements.
- These metrics are pushed to Prometheus PushGateway and visualized in Grafana.

# Benefits

- Provides early warnings for product-level health degradation.
- Ensures continuous insight into overall system performance.

# Synthetic Monitoring Through E2E Tests

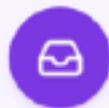

## Test Framework

Measures **Fitness Functions** (e.g., sync & registration times).

 Reads Logs & Uyuni API

PUSHES METRICS

## Prometheus Push Gateway

Receives and temporarily holds the metrics pushed by the test processes.

:9091/metrics

PULLS PERIODICALLY

## Prometheus Server

Scrapes the gateway periodically to store the time-series data.

 Aggregates Data

VISUALIZES

## Grafana Dashboards

Displays system health and trends beyond simple pass/fail tests.

Provides Early Warnings
