

Solution: Tool requesting to GitHub GraphQL API

- Fetches cards from our specific project board.
- Parses card titles (Feature/Scenario).
- Automatically adds Cucumber tags (e.g., @flaky, @bug_reported) to scenarios in .feature files before tests run.

Impact for Test Report Reviewer

- Visual status tags directly visible during test analysis, as part of the HTML report
- Immediate context on known issues, reducing redundant effort.
- Improved knowledge sharing & efficiency.

Goal: Bring Test Suite *stat* directly into the test execution context.

Scenario: Pre-requisite: install old packages on SLES minion

- Before
- When I apply highstate on "sle_minion"
- And I enable repository "test_repo_rpm_pool" on this "sle_minion"
- And I refresh the metadata for "sle_minion"
- And I install old package "milkyway-dummy-1.0" on this "sle_minion" without error control
- And I install old package "virgo-dummy-1.0" on this "sle_minion" without error control
- And I install old package "andromeda-dummy-1.0" on this "sle_minion" without error control
- 14 hooks

@new_issue

Scenario: Pre-requisite: refresh package list and check installed packages on SLE minion

test drama!**

TEST REVIEW SUMMARY

- Failed Features: 9
- Failed Scenarios: 22
- Breakdown By Status:
 - Bug reported: 3
 - Flaky Test: 1
 - New and reported: 5
 - Not reported: 12
 - Test Framework issue: 1

List of failed features and first failed scenario

- * Action chains on Salt minions
 - * [Flaky Test] Refresh package list and check installed packages after second downgrade on SLE minion
- * Build container images and CVE audit them
 - * [Not reported] Build the suse_simple image with and without activation key
- * Correct timezone display
 - * [Not reported] Add roles for the Malaysian user
- * Test Program Temporary Fixes (PTF) deployment
 - * [Test Framework issue] Successfully apply a Program Temporary Fix
- * Report database
 - * [New and reported] Cleanup: delete read-only user
- * Health Check tool based on a supportconfig
 - * [Bug reported] Execute Health Check tool with server supportconfig
- * Manage a group of systems and the Systems Set Manager
 - * [New and reported] Delete a package from systems in the SSM
- * Monitor PLM environment with Prometheus on a SLE Salt minion
 - * [New and reported] Visit monitoring endpoints on the minion
- * Debug the server after the testsuite has run
 - * [New and reported] Check salt event log for failures on server
